

The hat-guessing number

\downarrow
 $*b_* \rightarrow ab_*$

$$2i - j + k \equiv \begin{pmatrix} 0 \\ 1 \\ 2 \end{pmatrix} \pmod{3}$$

$F = \{a, b, c\}$

Decision

$*bb \rightarrow \underline{abb}$

$a*c \rightarrow abc$

covers abb

2 Strategy: Collection of decisions

$3 \cdot 9 = 27$

$|F|=4 \quad 3 \cdot 16 < |\text{conf}| = 4^3$

a			
	2	1	1
	1	2	3
	2	3	3

b			
	1	2	3
	2	(3)	1
	3	1	2

c		
	3	3
	3	

1 2 3
3 1 2
2 3 1

Latin square

$X_{ijk} \in \{0,1\}$
 ij entry = k

$\sum_i X_{*jk} = 1 \quad \forall jk$
 $\sum_i X_{i*k} = 1 \quad \forall ik$
 $\rightarrow \sum_i X_{ij*} = 1 \quad \forall ij$

} 3 dim. planner AP

12512 strategies

$$\left. \begin{aligned} \forall ijk \dots \sum x_{ijk}^* &\geq 1 \\ \forall jk \dots \sum x_{*jk1} &= 1 \\ \sum x_{i*k2} &= 1 \\ \sum x_{ij*3} &= 1 \end{aligned} \right\}$$

$x_{ijke} = 1$
 player e is responsible
 for conf. ijk

1.4. Multi-index Assignment Problems

Figure 1.3. Axial (a) and planar (b) 3-index assignment problems.
